

Not all DITA Solutions are Alike...

INNODATA ISOGEN Solutions Sheet

Choose a Proven Leader in XML Solutions

Innodata Isogen can help your company find and deploy the DITA solution that's right for your organization, enabling you to reap the full benefits of DITA's potential cost savings and productivity improvements faster and more efficiently.

Short for Darwin Information Typing Architecture, DITA enables controlled local specialization of XML document types in a way that preserves the ability to interchange information objects with other DITA users and with different DITA-aware applications and processors.

But even though DITA is clearly a major step forward for companies considering the adoption of XML, it is not a panacea for all content management problems. As an out-of-the box solution, DITA is still too general to satisfy the requirements of most users, especially authors... and many core DITA types require specialization to be made useful and sensible. In addition, deploying DITA does not change the fact that organizations will require business-specific authoring, content management and publishing systems.

Now that DITA has officially been accepted as an information standard by OASIS, many software companies are starting to provide tools with "out-of-the-box" functionality to support DITA. However, few of these tools satisfy all specific requirements for an organization. Therefore, many companies still need to review their content models and, as in any other XML development, plan for ways to develop and maintain their authoring, management, and publishing infrastructures.

FOUR ROADBLOCKS IN THE FAST LANE TO DITA SUCCESS

In particular, many companies need to watch out for four common roadblocks that often plague companies trying to deploy new XML-based content management systems:

- Inefficient processes
- Organizational boundaries
- Technology limitations
- Inadequate resource utilization

Innodata Isogen can help you find and deploy the DITA solution that's right for your organization, enabling you to reap the full benefits of DITA's potential cost and time savings faster and more efficiently

WHAT IS DITA?

DITA version 1.0 was developed by member companies as a common template for XML architecture, which means that companies seeking to deploy XML-based systems will no longer have to build separate document type definition (DTD) schemas. The establishment of this industry standard will shorten the time and lower the costs of implementing XML-based single-source publishing systems.

DITA is the crystallization of an XML system that IBM started developing in 2000 to manage its own internal documents. It was further refined by the OASIS DITA Technical Committee, which includes representatives of Innodata Isogen, Idiom Technologies and Nokia.

WORK WITH A PROVEN LEADER IN XML SOLUTIONS

With our deep experience in XML, we can help you avoid the four roadblocks and enable you to work with a wide range of software partners to deploy DITA-based solutions that will drive significant cost and time-savings throughout your organization.

XML LEADERSHIP

Our professional staff includes the world's leading information scientists— analysts, architects, engineers, programmers, business process and workflow experts, editorial specialists, product designers and production specialists.

In fact, our dedicated professionals have helped author many of the XML-related standards (including DITA) at the W3C, ISO, IETF, OASIS and other standards bodies. They are also considered some of the top experts in content repository cross-linking – which includes standards like XTM, XIndirect and Xlink.

ABOUT INNODATA ISOGEN

Innodata Isogen provides business services that help organizations create, manage, use and distribute information more effectively and economically. Innodata Isogen provides outsourced content services and content-related information technology (IT) professional services.

Innodata Isogen is headquartered in Hackensack, New Jersey, just outside of New York City. It has two additional solution centers in North America, seven production facilities in Asia (the Philippines, India and Sri Lanka) and a technology and tools development center in India.

We can help you deploy DITA-based solutions that will drive significant cost and time-savings throughout your organization
